Stockholm, Sweden and Kippenheim Germany
01 November 2016

JSI develops customized software plug-in for Devyser's new NGS products

Devyser and JSI Medical Systems announce a joint solution for in-house processing of next-generation sequencing (NGS) data. The software platform provided by JSI has a newly developed plug-in that is compatible with all Devyser NGS products, including Devyser BRCA and Devyser CFTR. The solution is now available for all customers using the JSI SEQUENCE Pilot platform, comprising more than 400 installations worldwide. In addition, Devyser will be able to offer installation of SEQUENCE Pilot to its own customers that have in-house analysis capability.

This joint solution will simplify and streamline the diagnostic process for clinicians in hospitals and laboratories, enabling targeted therapies that benefit patients within oncology and hereditary diseases.

Ulf Klangby, CEO and co-founder of Devyser, says, "Being able to offer our NGS kits to users of JSI's software platform is a fantastic opportunity for us. JSI's reputation of being at the forefront of bio-informatic platform development is completely aligned with our own philosophy of meeting the needs of the routine diagnostic lab, in this case those with full analytic capacity in-house."

Joachim Strub, CEO of JSI Medical Systems, comments, "We are excited to enable a robust NGS solution together with Devyser. This will empower our customers and future users of the JSI platform to maintain full control of their analytical processes and results using the latest NGS technology."

About Devyser

Devyser is specialized in the development, manufacture and sales of diagnostic kits for complex DNA testing within oncology, reproductive health and hereditary diseases. The products are used to guide targeted cancer therapies, to enable rapid prenatal diagnostics, as well as in a wide array of genetic tests. Devyser's product development focuses on simplifying and streamlining complex testing processes to improve throughput, reduce hands-on time and produce accurate and trusted results. Support and customer care is provided through in-house experts. Founded in 2004 and based in Stockholm, Sweden, Devyser has sold more than half a million genetic tests to over 50 countries worldwide, both through its distributor network and directly to laboratories. Find out more about Devyser at www.devyser.com and follow on [LinkedIn](#) and [@Devyser](#).

About JSI Medical Systems

JSI Medical Systems develops and distributes software tools and related support services for genetic professionals. Founded in 2002 in Germany, the company has established itself as a

leading provider of software for sequencing data analysis. With SEQUENCE Pilot, JSI Medical Systems offers sophisticated bio-informatic software solutions covering a wide field of sequencing techniques. With more than 400 installations worldwide, SEQUENCE Pilot analyzes data generated by next generation sequencing, capillary sequencing, MLPA analysis and HLA sequencing-based typing. JSI Medical Systems develops products in close cooperation with customers with a focus on user-friendliness, efficiency and optimal integration in the daily work routine.
